1. eComFax PLATFORM

1.1 Access to the eComFax website

The eComFax PRO website can be accessed by two ways:

1. Through the website <https://www.ecomfax.com> and clicking on “login”
2. Through the URL: <https://www.ecomfax.com/user>

1.2. Start Menu

After introducing the login and password you will access the “start” menu of the eComFax website where you will see in both the left-hand column and in the center of the window different user options, such as: how to send a fax or an SMS, see a list of sent and received messages, configure your account, and read the privacy policies of the user.

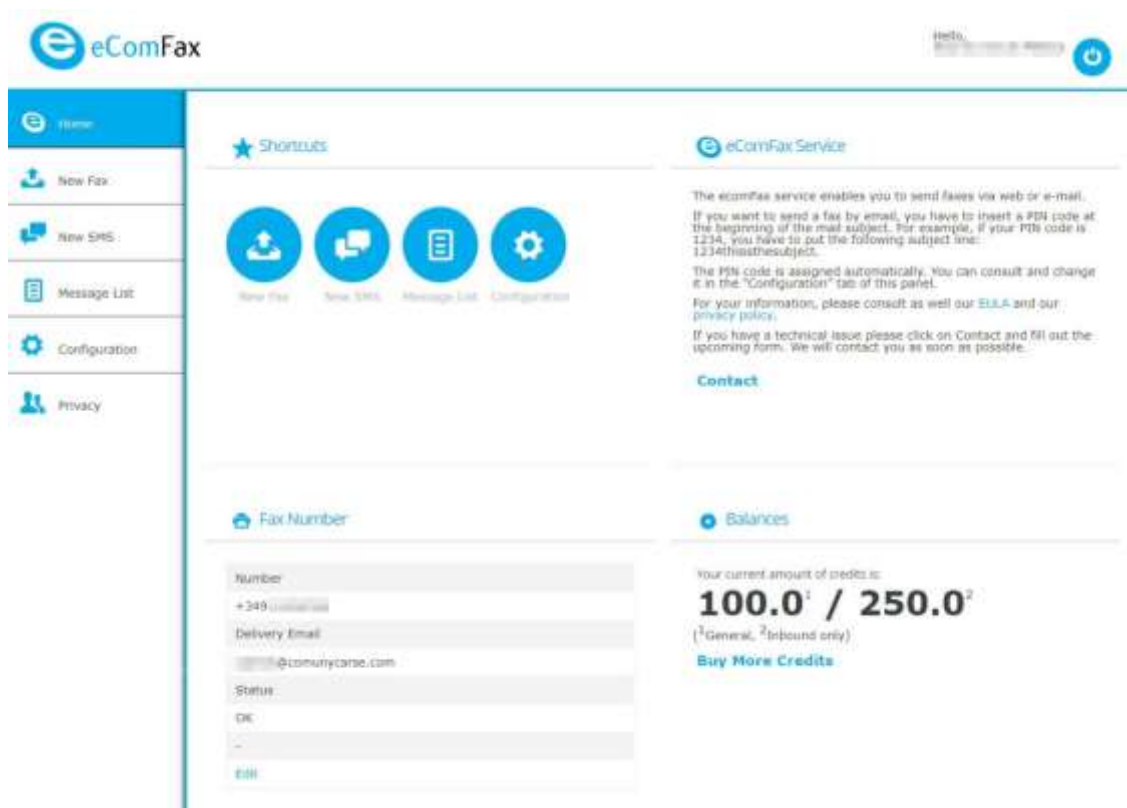

Illustration 1 Start Menu

In the bottom left-hand area, you will see information regarding the fax numbers, the delivery email address and the status of your subscription.

The “delivery email address” field indicates the email address in which the incoming faxes are received. This field is established upon signing up for the service and cannot be modified on this page directly.

It is possible to configure additional email accounts for each fax number so all additional email accounts will also receive the faxes. The accounts will receive the same messages, in other words: you cannot configure the accounts so only one receives messages from a specific sender.

Illustration 2 Alternative email addresses

In the top right-hand area you can consult the “balance” tab which corresponds to the percentage of corresponding depletion of your subscription, and the remaining balance of your account in the case that there has been any additional charges.

1.3. Configuration

To access the configuration of your account click on the “configuration” tab.

1.3.1. Subscription

The first option to choose from is “subscription,” in which you can find your company’s contact information.

The screenshot displays the eComFax Pro web application interface. At the top left is the eComFax logo. The top right shows a user profile with the name 'Hello, [username]' and a power icon. A left sidebar contains navigation links: Home, New Fax, New SMS, Message List, Configuration (highlighted), Subscription, Delivery, Notifications, Printing, Reports, and Privacy. The main content area is titled 'Contact Information' and contains a form with the following fields: Name, Email* (pre-filled with 'jason@ecomfax.com'), Telephone, Address (pre-filled with 'C/ Jassim Tuma 2'), City (pre-filled with 'Pinar de Aland'), Postal Code/Zip Code (pre-filled with '36204'), and Tax ID Number. Below the form are two buttons: 'Get Access ID' and 'Save'. At the bottom of the form area, it says '*Required fields:'.

Illustration 3 Contact Information

In order to save any changes that you have made in the “configuration” menu you should click “save” at the bottom of the page.

1.3.2. Delivery

We can see the following delivery options:

The screenshot displays the eComFax web interface. On the left is a sidebar menu with options: Home, New Fax, New SNE, Message List, Configuration (highlighted), Subscription, Delivery, Notifications, Printing, Reports, and Privacy. The main area is titled 'Delivery' and contains a configuration form. The form has the following fields: 'Email' (pre-filled with eComFax@comanyname.com), 'PIN' (1234), 'Customized Fax Number', 'Language' (English), 'Time Zone' (UTC+01:00 Brussels, Copenhagen, Madrid, Paris), 'Dialing codes (International Prefix, Country Code, National Trunk Prefix)', 'Custody Period' (7 day(s)), 'Custody Type' (All), and 'Secure Access Period (days)' (5). A 'Save' button is located at the bottom of the form. A note at the bottom left of the form area indicates '*Required fields'.

Illustration 4 Delivery Configuration View

Domain for sending faxes: Indicates the valid domains that permit the sending of faxes to eComFax.

Language: Indicates the defect language of the notification messages.

Time Zone: Because eComFax is a world-wide service, you can adjust this field and its time zone so as to receive the faxes at the appropriate date and times for your location.

Dialing code: In national calls it is unusual to include the country code. eComFax only uses international numbers, with this option the deliveries to its country are completed correctly. Add the country code here so that the system will deliver it correctly.

Format of the Document of the Incoming Fax: You will receive faxes as an email attachment. Here you can select the format of the attachment: PDF (normal or long-lasting "A"), searchable PDF with OCR (normal or long-lasting "A"), or TIFF.

1.3.2.1. Storage and Safekeeping of the Fax

Based on our experience in the transmitting of information through FAX we have seen that the storage of the fax is important or essential to rescue certain circumstantial situations or others in the distribution or the forwarding that can occur, and with the stored fax we can recuperate or re-send; without it being stored the information will be lost.

In addition to the legal regulations, MiFID (Markets in Financial Instruments Directive) require the storage of electronic transactions during at least 5 years. The LOPD (Data Protection Legislation) requires HIGH level documents to be stored for a period of at least 2 years and requires access for audits.

Through the intuitive and simple configuration tool we can choose the quantity of information and the amount of time for which we want to store it. By default, and without any additional cost, each sheet will be stored for 30 days.

The screenshot displays the 'Configuration' menu on the left sidebar, with 'Custody Period' selected. The main form area shows the 'Custody Period' dropdown menu open, listing options from 'No custody' to '10 years(s)'. The '30 day(s)' option is highlighted. Other visible fields include 'Customized Fax Number', 'Language' (set to English), 'Time Zone' (set to UTC+01:00), and 'Dialing codes'. A note at the bottom indicates '*Required fields'.

Illustration 5 Selecting Custody Period

Similarly, and without additional costs, the document will be erased immediately after having being sent.

1.3.3. Notifications

The subject of the incoming and outgoing faxes can be configured In the “notifications” fax tab. This allows you to see the sender or the incoming faxes in the email list without having to open the message.

Illustration 6 Notifications

Subject of outgoing faxes

Format: The field used for those who wish to personalize the subject of outgoing faxes

Illustration 7 Subject of outgoing faxes

Format: The field used for those who wish to personalize the subject of incoming faxes

SMS notifications: the field to introduce the mobile phone number where you will receive a reminder of the exhaustion your credits.

The screenshot shows the 'SMS Notifications' configuration page in the eComFax Pro interface. On the left is a sidebar with navigation links: Home, New fax, New SMS, Message List, Configuration (selected), Subscription, Delivery, Notifications, Printing, Reports, and Privacy. The main content area is titled 'SMS Notifications' and contains the following fields and options:

- Mobile phone:** A text input field with the placeholder '442123456789'.
- Reminder by SMS when your credits are almost exhausted:** A checkbox that is currently checked.
- SMS Subject:** A blue button with the text 'SMS Subject:'.
- Incoming SMS from %2**
- The notification subject can contain the following placeholders:**
 - %1: Message ID
 - %2: To Mobile Number
 - %3: To Name
 - %4: Billing Code #1
 - %5: Billing Code #2
 - %6: To Fax
 - %7: Date
 - %8: Status
 - %9: Reason
 - %10: Message
- Save** button.

Illustration 9 SMS Notifications

When the client has consumed 80% of his or her credits, he or she will receive a notification email. There is the possibility of receiving an SMS notification. Sending these SMS notifications will consume credits (1.5 credits per notification.)

When the client sends a Fax and does not have sufficient credits, the service will cover the full transmission cost, however, the due credits will be paid when the client purchases the following credits.

When the client wishes to receive a FAX and does not have sufficient credits, the platform will not resend the image of the fax via email but a notification informing you that you have received a fax that will be retained during a maximum of 30 days until you once again have enough credits.

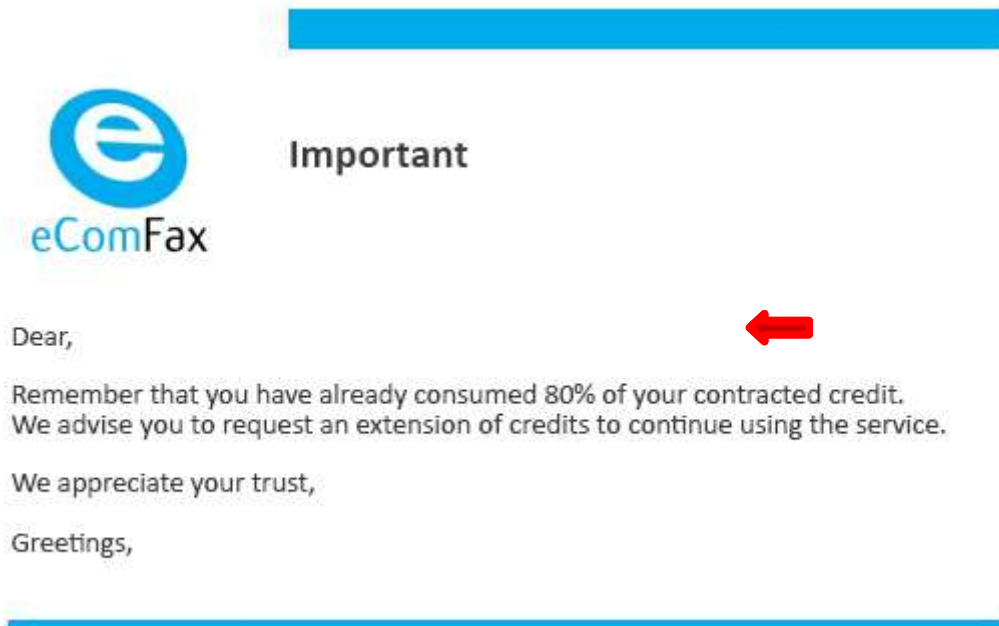

Illustration 10 Example of reminder email of near exhaustion of available credits

Remember that to acquire more credits you should contact your sales agent.

Subject of outgoing emails

Format: Field used for those who wish to personalize the subject of the SMS notifications

The screenshot shows the 'SMS Notifications' configuration page in the eComFax Pro interface. On the left is a sidebar menu with options: Home, New Fax, New SMS, Message List, Configuration (selected), Subscription, Delivery, Notifications, Printing, Reports, and Privacy. The main content area is titled 'SMS Notifications' and contains the following fields and options:

- Mobile phone:** A text input field with the value '8427123456'.
- Reminder by SMS when your credits are almost exhausted:** A checkbox that is currently checked.
- SMS Subject:** A blue button with the text 'SMS Subject:'.
- Incoming SMS from %2**
- The notification subject can contain the following placeholders:**
 - %1: Program ID
 - %2: To Mobile Number
 - %3: To Name
 - %4: Entry Code #1
 - %5: Entry Code #2
 - %6: To Fax
 - %7: Sender
 - %8: Subject
 - %9: Report
 - %10: Message
- Save:** A blue button at the bottom.

Illustration 11 Subject of outgoing emails

1.3.4. Reports

Within the automatic reports we have the option to program the automatic sending of the report of outgoing and incoming faxes; including information regarding frequency, format, addressee, or language.

The screenshot shows the 'List of Automatic Reports' page in the eComFax Pro interface. The top header includes the eComFax logo and the user name 'Hélio, Ricardo Garcia Peláez' with a power button icon. The left sidebar menu is identical to the previous screenshot, with 'Configuration' selected. The main content area is titled 'List of Automatic Reports' and contains:

- A table with columns: Report Type, Frequency, Format, Backprints, Language, and Next Scheduled Report.
- A message: 'No automatic reports configured.'
- Add:** A blue button at the bottom.

Illustration 12 Automatic reports

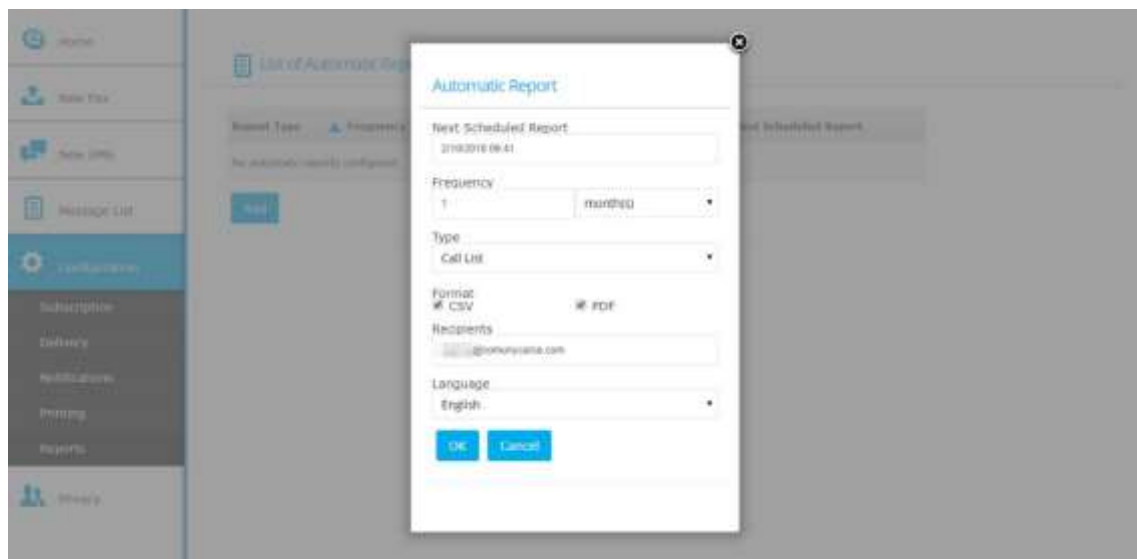

Illustration 13 Detail of automatic reports

2. Sending Faxes

2.1 Sending from the eComFax website

To send a fax from eComFax, the user should access the “faxes” tab by choosing the option “new fax.”

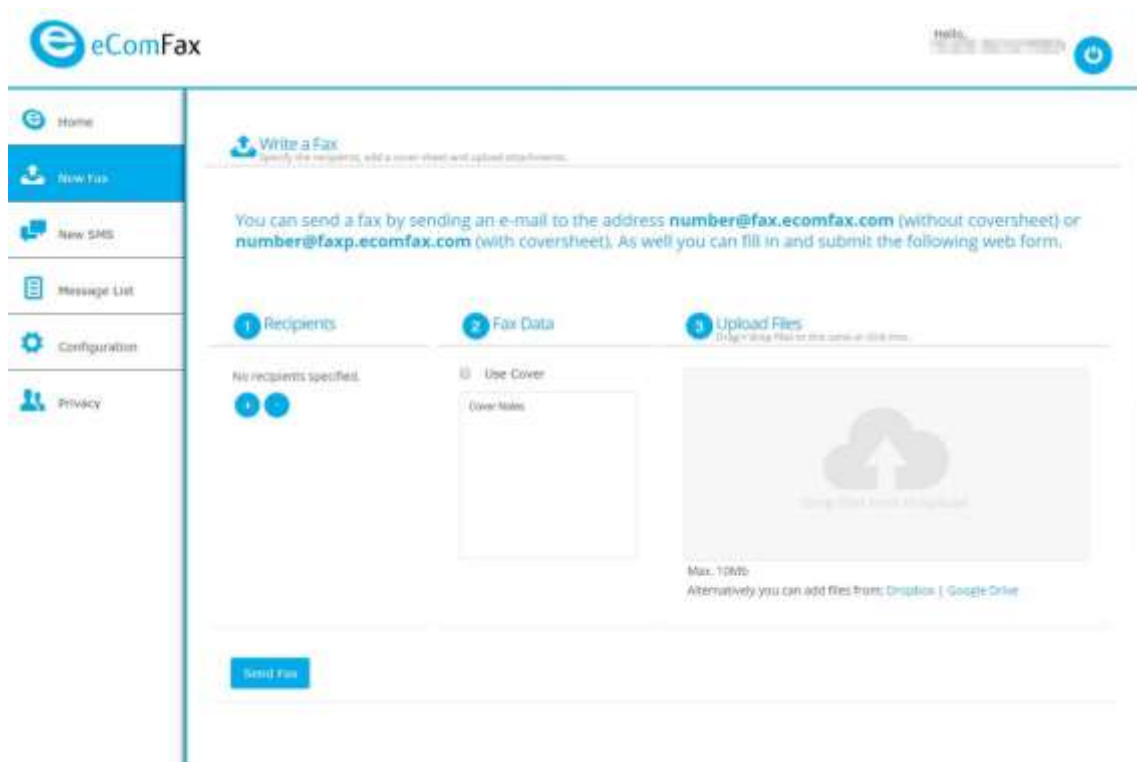

The screenshot shows the eComFax website interface. On the left is a sidebar menu with options: Home, New Fax (highlighted), New SMS, Message List, Configuration, and Privacy. The main content area is titled 'Write a Fax' with a sub-header 'Specify the recipients, add a cover sheet and upload attachments.' Below this, a text block explains that faxes can be sent via email to 'number@fax.ecomfax.com' (without coversheet) or 'number@faxp.ecomfax.com' (with coversheet). The form is divided into three numbered sections: 1. Recipients, 2. Fax Data, and 3. Upload Files. Section 1 shows 'No recipients specified' with a '+ -' button. Section 2 has a 'Use Cover' checkbox and a 'Cover Notes' text area. Section 3 features a large cloud upload icon with the text 'Drop files here or click to upload', a 'Max: 10MB' limit, and a link to 'Alternatively you can add files from: Dropbox | Google Drive'. A 'Send Fax' button is located at the bottom left of the form area.

Illustration 14 Sending a fax via website

The available options to send a fax are:

Addressees: Indicate the fax number and/or the name of the addressee. You can send the same fax to multiple addresses. Click on the “+” symbol to add more addressees.

In this field you should also input the type of document that you wish to send; Fax, CertiFAX, SecureFax or PCI Fax.

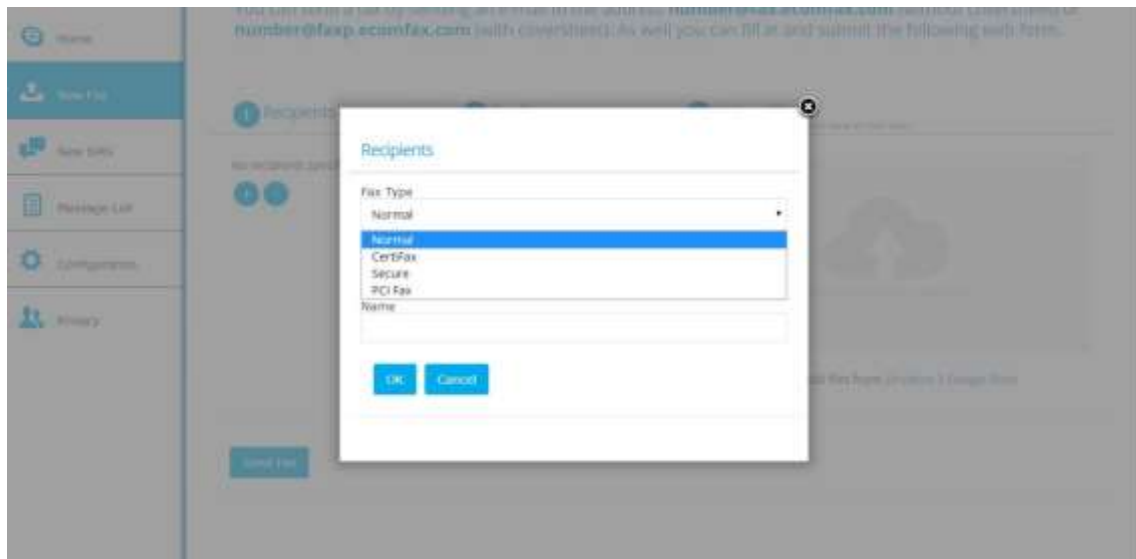

Illustration 15 Fax Type Selection

Using the cover page: It is optional to use a cover page. Activate it and fill in the information from the cover page.

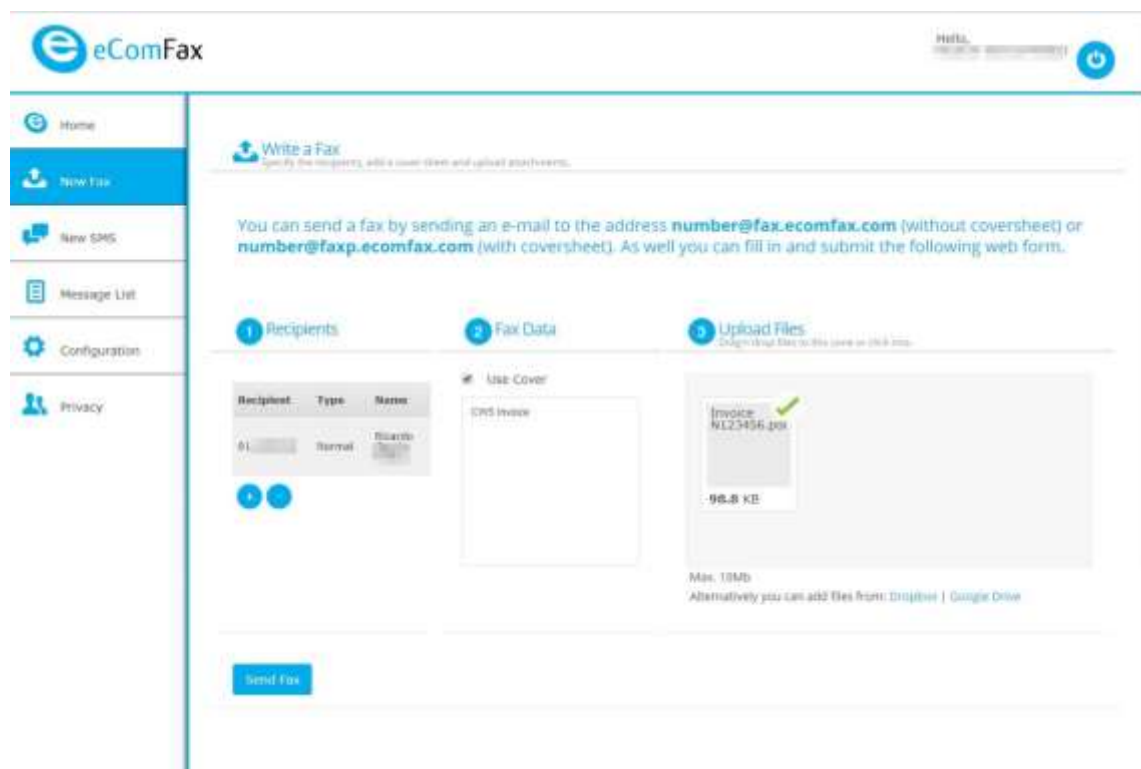

Illustration 16 Sending a fax with a cover page via the website

- Fill in the “subject” field.
- Attach the document that you wish to send via fax.
- Warning: Only the attachment will be sent. The body of the email will always be ignored.
- Click “send”

2.2.2 With a cover page

In order to send a fax with a cover page, indicate in the “to” field the following email address:

`telephone_fax_number@faxp.ecomfax.com`

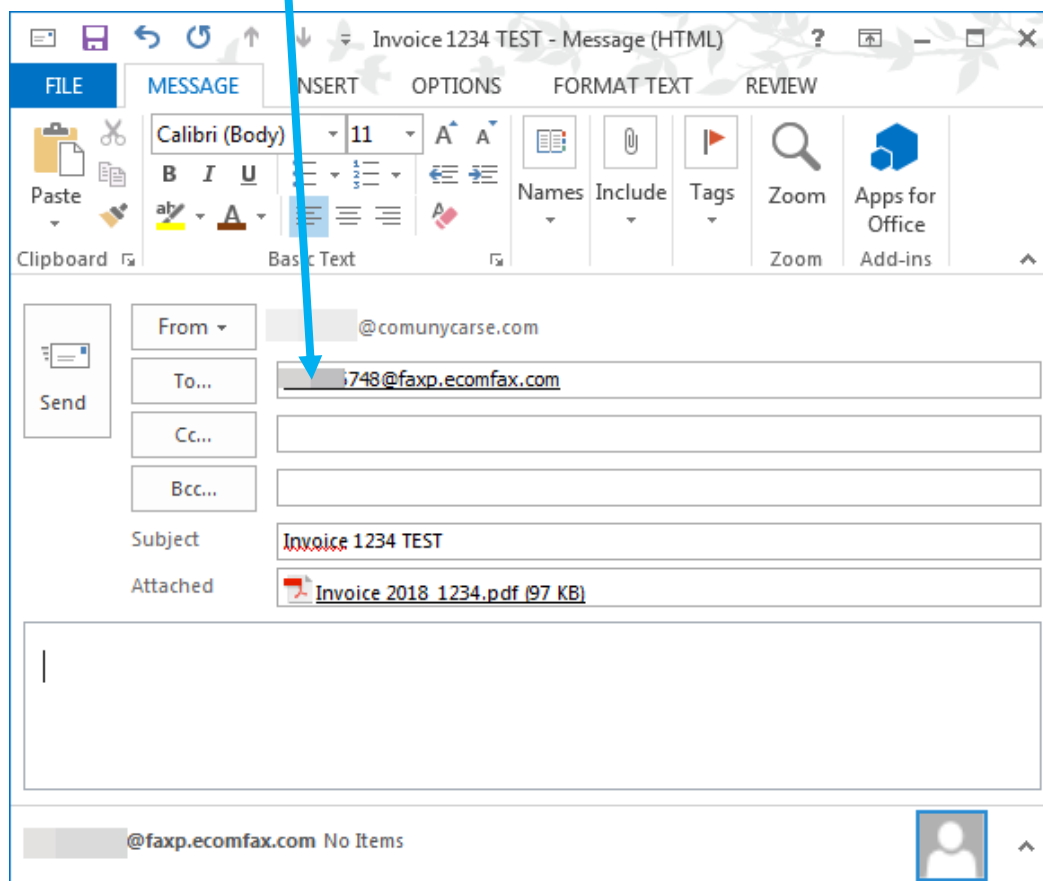

Illustration 18 Sending a fax with a cover page via email

- Fill in the “subject” field. The subject of the message will be the notes on the cover page.
- Attach the documents which you wish to send via fax.
- Warning: Only the attachment will be sent. The body of the email will always be ignored.
- Click “send”

2.3 Confirmation message of the transmission status

Once the fax has been sent, the user will receive an email informing him or her of the transmission status of said fax:

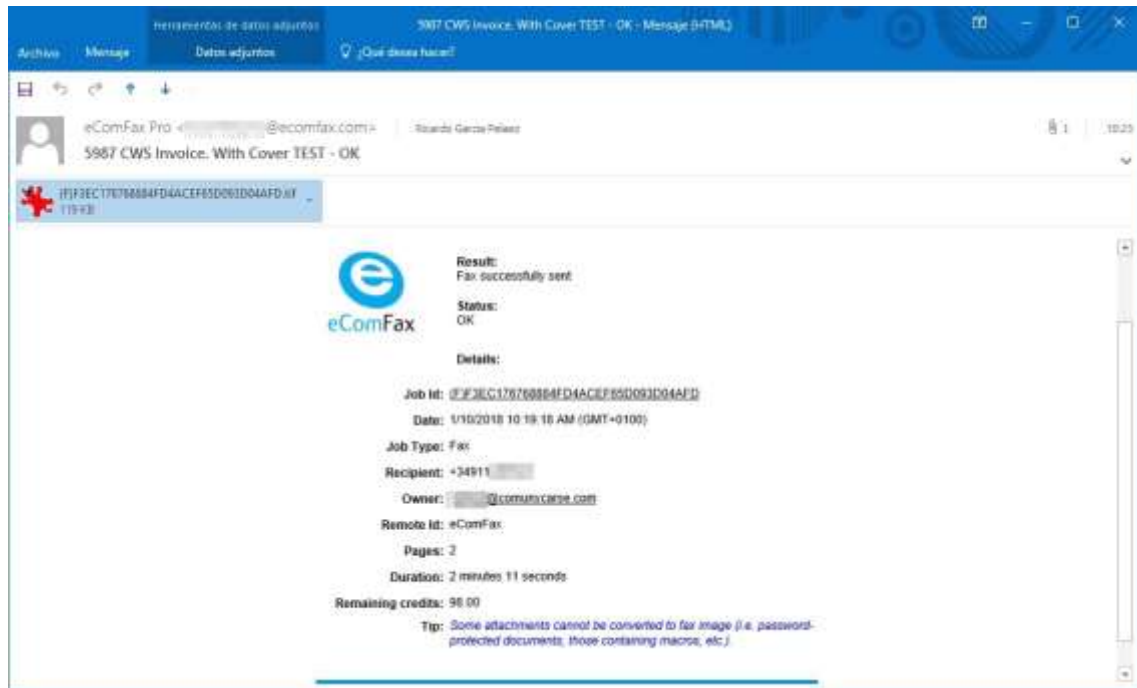

Illustration 19 Example of notification email of transmission status of sent fax

3. Reception of Faxes

or the reception of faxes an email will be received as a PDF attachment by default or in searchable PDF (optional.) eComFax will send the sender of the fax a shipping acknowledgement of his or her fax. The available formats for the reception of faxes are: PDF, searchable PDF, or TIFFLog In Page.

3.1 Consult via eComFax

To consult the history of received faxes, you should access the eComFax website, click on the “faxes” tab and choose the option “received faxes.”

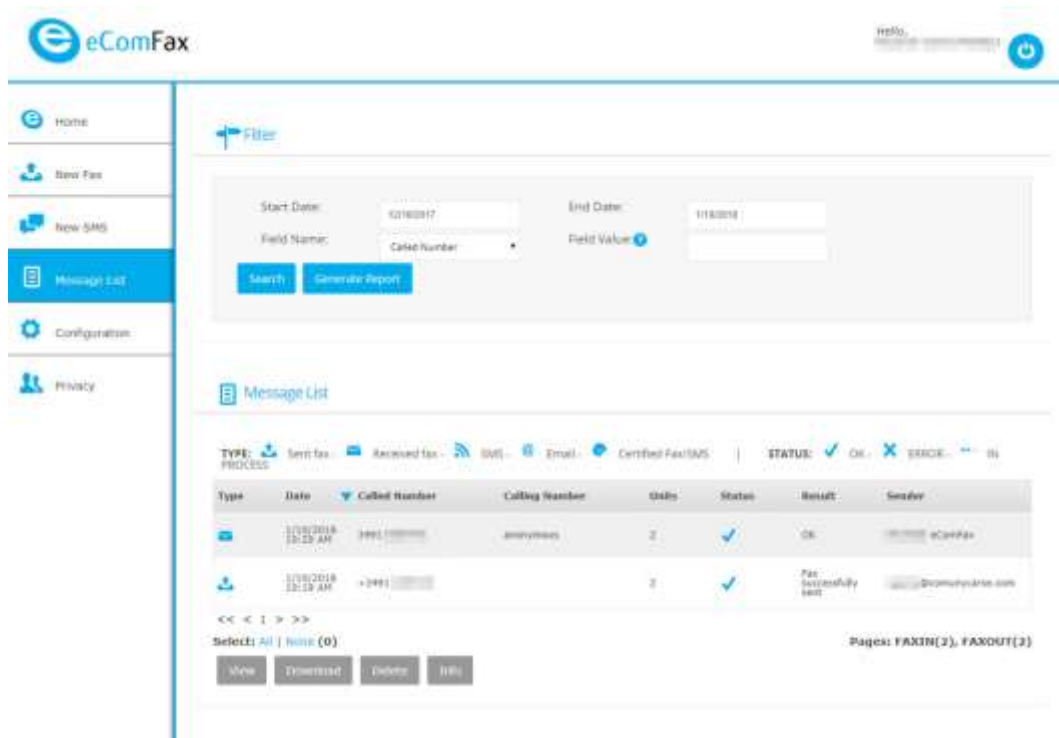

Illustration 20 Received faxes list

3.2 Consult via email

When you receive a new fax, you will receive an email attachment to the email, or email, that your account was configured to when you signed up for the platform.

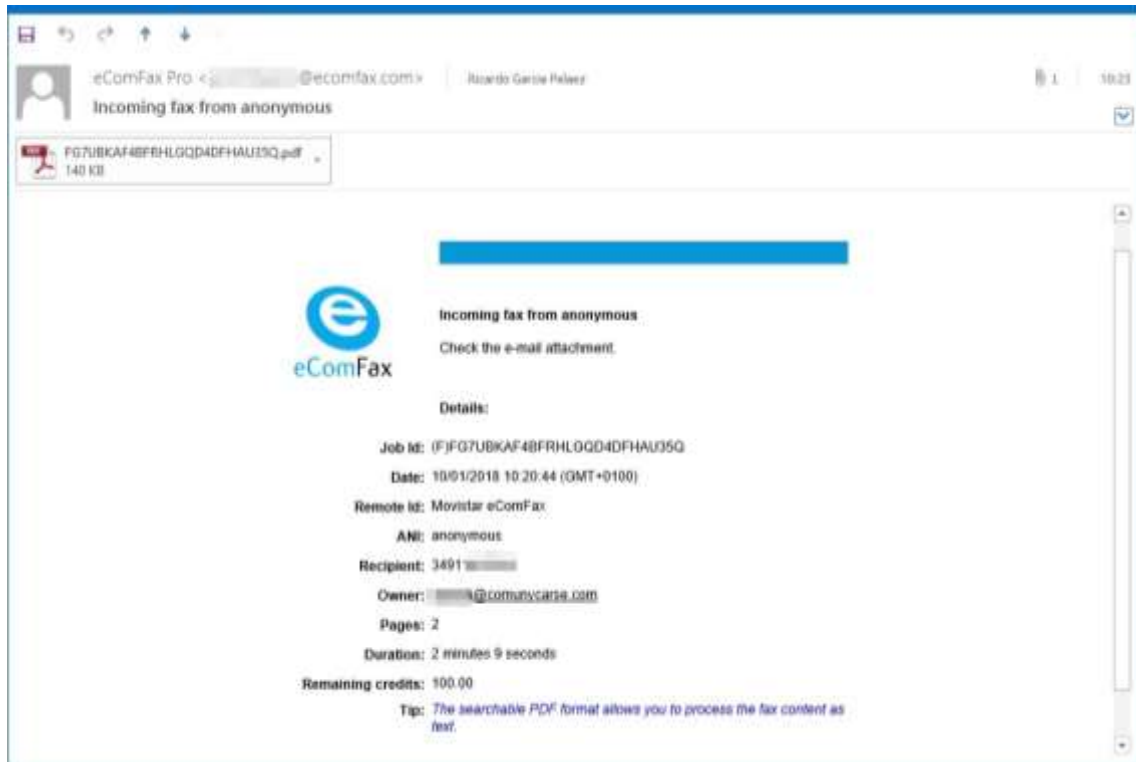

Illustration 21 Example of a received fax via email

The user can choose the option to receive a fax in searchable PDF format, which facilitates searching by the content of the document thanks to OCR which converts the image in the document to text by eComFax.

The user can search the contents in their inbox thanks to the combination of searchable PDF format and the storage of the fax.

4. SecureFax or Safe Fax and PCI Fax

The Statistics module provides updated and visual information about the evolution and information regarding the number of calls, recorded time accumulated daily and the ranking of extensions most active within the service. The communication demands a level of security in accordance with its content, and on occasions, the security offered by standard email and fax is not enough. Maximum security should be guaranteed for communications with specific economic or financial information regulated by international controls, as in the case of PCI DSS rules (Payment Card Industry Data Security Standard.)

For this, eComFax facilitates two new functions, Safe Fax and SecureFax, for the sending of critical information where the addressee wishes to guarantee the integrity and confidentiality of the information; preventing vulnerabilities and obtaining an acknowledgement of receipt in real-time. PCIFax, in addition to the previous functions, guarantees the impossibility of storage, printing, or forwarding; following the PCI DSS rules.

SecureFax is a new way of sending information via the eComFax interface. It allows the sending of information with an electronic certificate, time stamp, and acknowledgement of receipt. This information is guaranteed to not have been modified and includes the date of creation by a certified authority by means of an advanced digital certificate.

This allows the fulfilment of important regulatory requirements like those imposed by the LOPD having to do with the treatment of “high level” information such as audits and the traceability of access.

The addressee receives a link in order to access the information, and when he or she does, the sender is informed of this action.

When the information is regulated by the PCI DSS rules, the addressee should not be able to store, print, or forward the information; making FAX PCI an appropriate solution.

Within SecureFax the following advantages stand out:

- Acknowledgement of receipt and download
- Secure HTTPS and TLS connections
- Automation from ERP and third-party applications
- Web interface and SMTP
- Record of mailings
- eComFax technology
- Possibility of erasing sent documents
- Safekeeping of sent documents

4.1 How to send a SecureFax or Safe Fax

With SecureFax you can send information as if it were a fax. This information travels from the sender to storage where it is converted into Fax format and the addressee must pick it up.

In this process, both the content and in its transmission must pass through maximum security. In addition, the sender will be informed of each step taken by the addressee: if it is collected (when and where) or if it is not collected.

Like in eComFax there are two possibilities to send a SecureFax, via navigating the application or via email.

We will first look at how to via the navigator, once logged-in and in the home screen, we will choose the “new fax” icon.

In the following window we will choose the addressee or create a new addressee by clicking on the “+” symbol. Now is when we can choose the way that we will send our information: normal, Certifax, SecureFax, or PCIFax.

If we choose normal or Certifax, we must input the fax number of the destination. However, if it is a SecureFax or PCIFAX, the system will request an email address.

We should input the addressee's email, choose if the document has a cover page or does not, input the text for the cover page, and finally the attach the files we wish to send (if that is the case.)

Now we will see how to send a Secure Fax via our email.

In order to send a SecureFax via email we must input the email of the addressee in the following format:

We put the address, but substituting the “@” for a “+” symbol followed by “@securefax.ecomfax.com” (to send with a cover page) or “@securefaxp.ecomfax.com” (to send without a cover page.)
The cover notes will be included in the “subject” field.

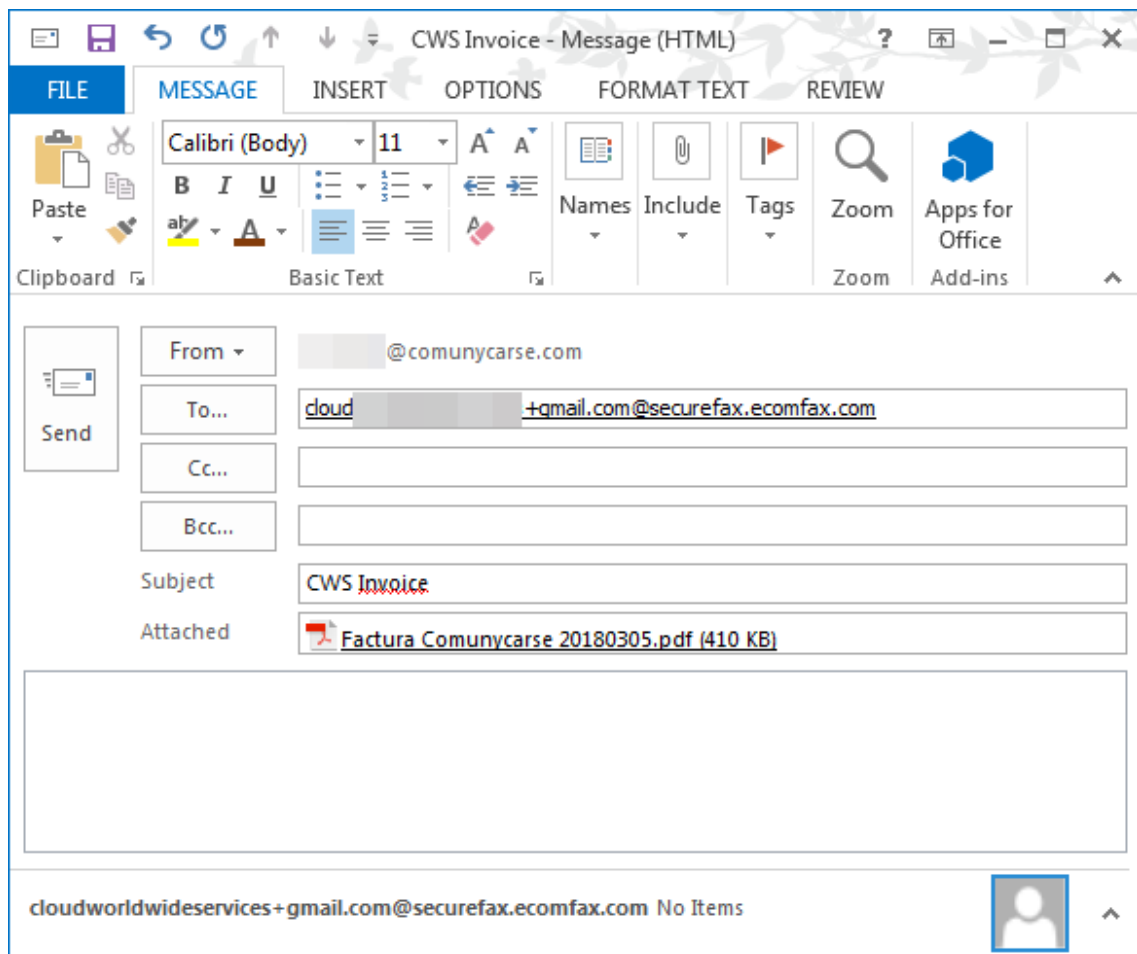

Illustration 22 Example of sending a SecureFax via email

Finally, if we wish to include an attachment we should do it the same way as if we were doing it from the web interface.

4.2 How to receive a SecureFax or Safe Fax

Let's see the process of receiving a Safe Fax.

When we send a SecureFax or Safe Fax to a user who has never used this service, he or she should login to the application using a new password.

The addressee will receive an email whose subject is "Safe Fax" and will indicate who it is from. This email has a link that when clicked a new-session, start window will appear in the eComFax application.

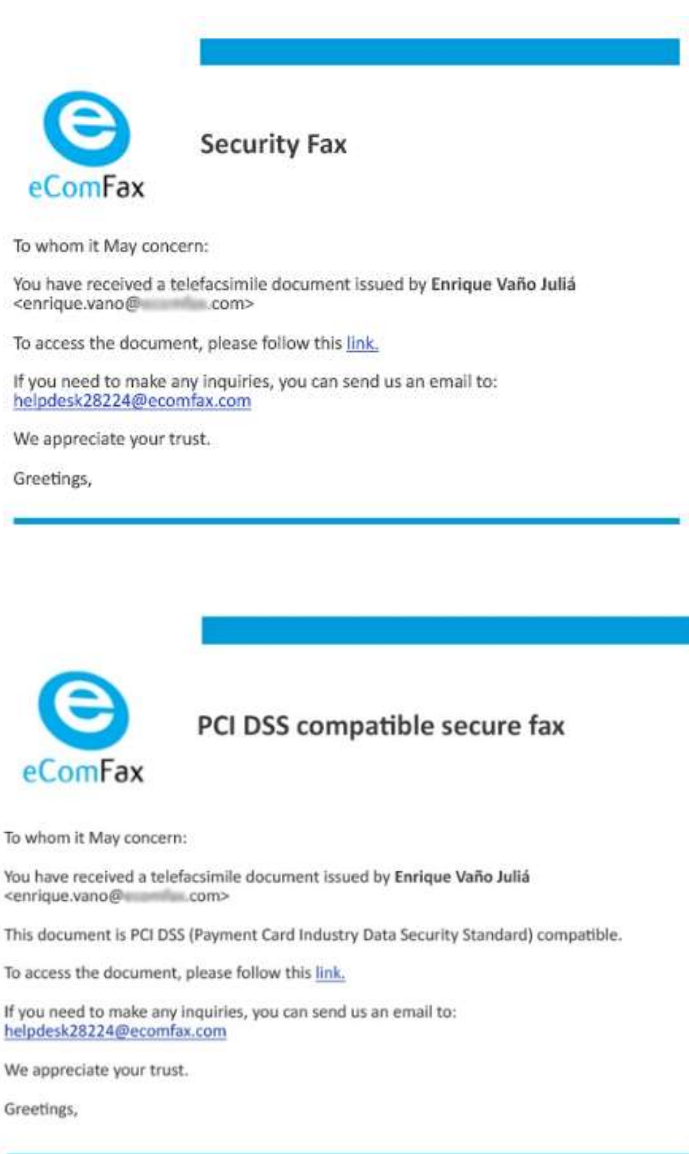

Illustration 23 Example of notification of SecureFax or PCI Fax

The first time, the application will ask us for a password to be input twice and a mobile phone number. After a few seconds you will receive an SMS on your mobile phone with an activation code which you should introduce in the login window so as to access the application.

Immediately you will see the document with all of its contents. If we close this window we will see the eComFax interface for this new user in which he or she can see his or her received messages in the “message list” tab of the menu, see each message, and see information related to its date, expiration date, or who has accessed the message.

In addition, you can download this document and check that it is guaranteed to not have been modified and that the date of creation has been certified by an authority by the use of an advanced digital signature.

4.3 Notifications of Information of Safe Fax or SecureFax

SecureFax has a set of notifications to inform the owner and guarantee proper performance.

When you sign up for eComFax you will indicate the email in which we should send the message and notifications. Furthermore, eComFax allows another three emails for the same function.

As soon as a SecureFax is sent, you will receive a notification notifying you of the proper performance of the system. In the notification you can check who the sender is and who the addressee is, how many credits you have left, and the date and ID of the document. Also, you can delete the document and have the option to recuperate it at a later time.

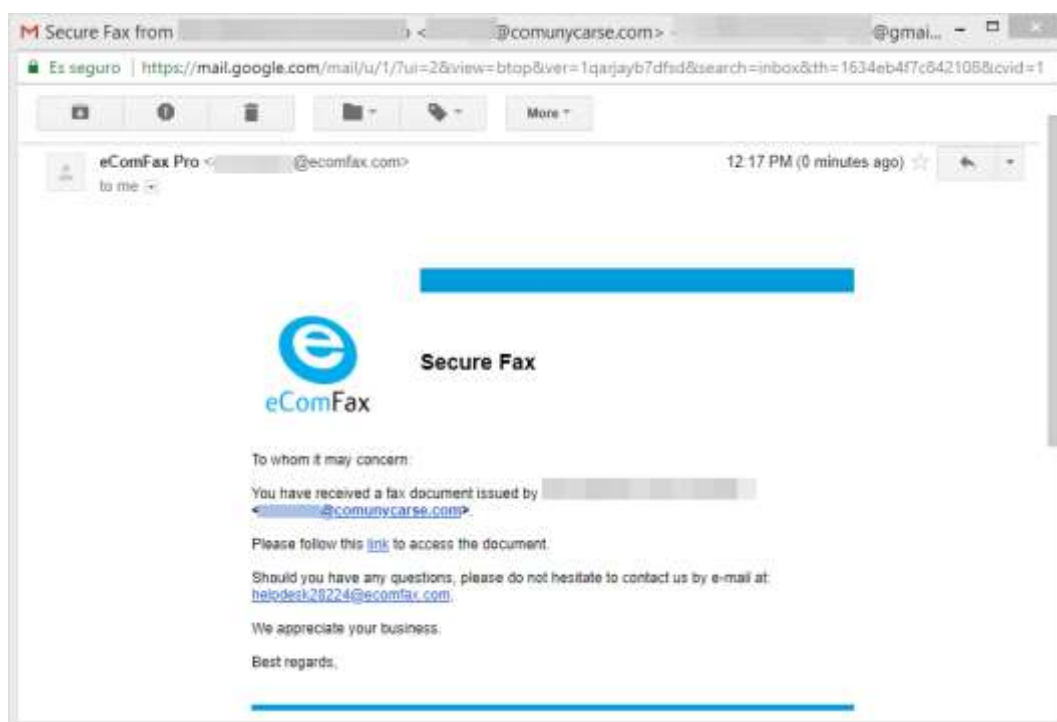

Illustration 24 Sending Reports

If after a period of time the addressee has not opened the document, the sender will receive a notification advising of the expiration date and allowing him or her to extend the expiration date by resending the message with the link.

Conversely, if the addressee does access the document, the sender will receive a notification with the date and time of the access.

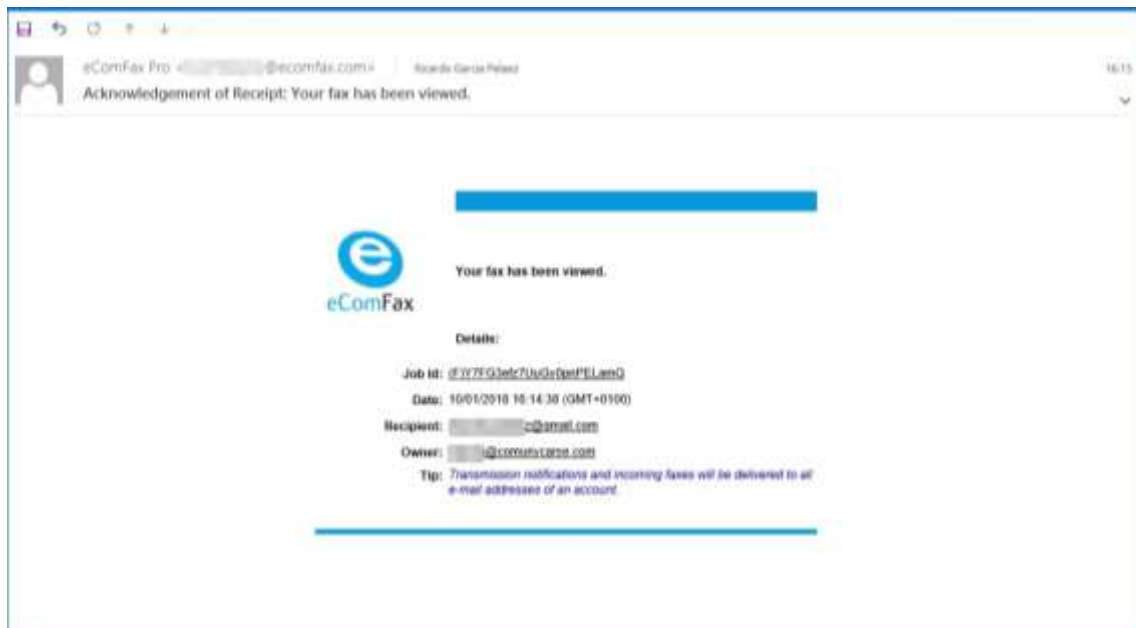

Illustration 25 Read-notification of SecureFax and PCI Fax

5. CertiFax

The Certified Fax service is an extension of the eComFax product with the primary objective of incorporating a probatory value, equivalent to Electronic Burofax, to the sending of faxes. The CertiFAX service acts as a trusted third party (law 34/2002, July 11th and Directive 2000/31/CE): someone other than the parties involved in the transaction (the sender and the addressee of the certified fax) testifies as an independent witness, thereby certifying that the determined transaction has been completed and the evidence kept safe for future uses.

Within SecureFax the following advantages stand out:

- Report of certification in signed PDF
- Safekeeping of certified faxes (5 years)
- Web interface and SMTP
- History of certified fax. Audits of accesses
- Notary testimonies
- eComFax technology

5.1 Operation of CertiFax

The CertiFAX system consists of the sending of a fax which issues a record of delivery certification and the content of the message to the sender. Comunycarse, through its affiliate CWS, is a trusted third party in the delivery of fax, in addition to adding a time stamp. This certifies the content, date, and time. Each SMS certificate issued includes a text indicating its certification character.

The certified fax includes a locator in the top area of the cover page. This locator allows you to review the information of the fax and see its content. The sender can also access the operations history and request notary testimonies by indicating the locator code on the client's CertiFAX website. In addition, it is possible to access through the QR code that appears on the cover page.

Cover Page

Certification Report

Illustration 26 Example of CertiFax

The first page of the certified fax includes a QR code in the top, right-hand area. The certification report of delivery includes this same QR code in the first page in the bottom, right-hand area. This QR code contains the same information as shown in the previously mentioned locator.

The QR code can be scanned by using mobile devices in order to directly access the client CertiFAX website and show the information associated with the certified fax and the available operations.

5.2 Sending Methods

The CertiFAX module can be used via the client's website or their email address, the same way as the sending of faxes using eComFax. It is as easy as attaching a document and sending it by email.

5.2.1 From Website

It is not necessary to install anything in order to consult the client website or send documents. The normal use of the client website is to change different configuration options in the platform. These web services allow adding, modifying, and eliminating users from the platform, consulting information, or requesting notary testimonies.

5.2.2 From MAIL

CertiFAX can be used via any client's email address. It is as simple as attaching a document and sending it to an email address. In order to guarantee security, CertiFAX uses an inverse-check system of DNS which ensures the origin of the document; avoiding identity impersonations, a problem that other platforms suffer.

For deliveries you should indicate in the "for" field the telephone of the fax and the addressee followed by: @certifax.ecomfax.com

The subject of the message will appear in the cover page of the certified fax. Attachments in the message form part of the content of the CertiFAX and are also certified. The rest of the body will be ignored.

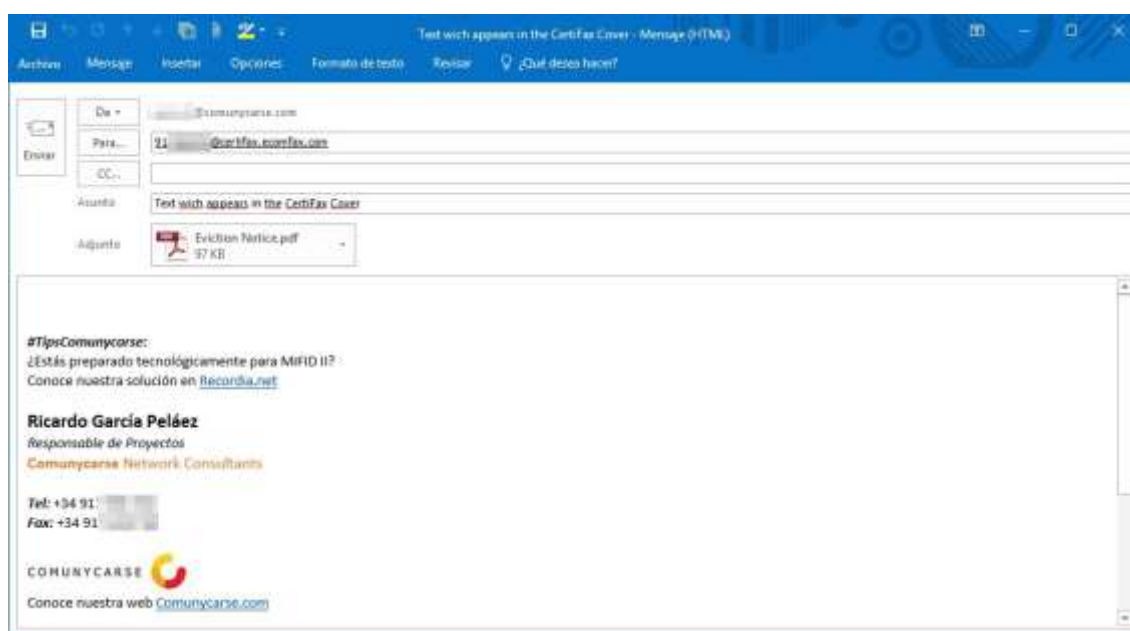

Illustration 27 Example of a sent CertiFAX sent via email

Once the CertiFAX has been sent, an email with the certified delivery report and the content of the message will be sent to you.

5.3 Reporting

In the same manner as in eComFax, in addition to having access to sent faxes and their reports of the client in email, from the client's eComFax website it is possible to send and consult certified faxes.

Certifax offers distinct reports for the use of the platform. These reports can be consulted online or issued automatically and sent by email as frequently as the client wishes.

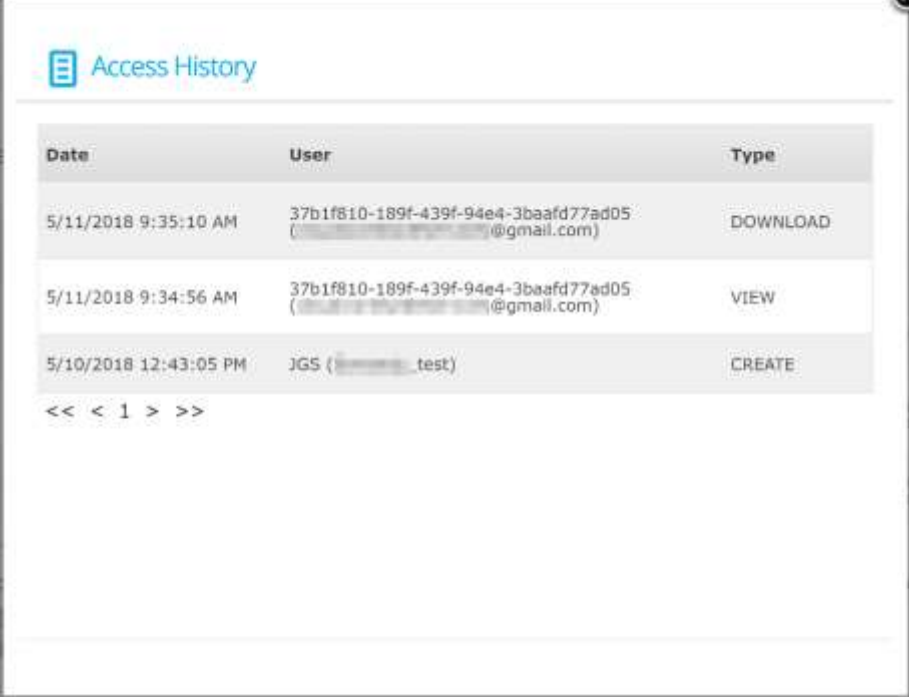

The screenshot displays the eComFax web application. On the left is a sidebar with navigation links: Home, New Fax, New SMS, Message List (highlighted), Configuration, and Privacy. The main content area features a 'Filter' section with input fields for 'Start Date' (01/11/2018), 'End Date' (01/12/2018), 'Field Name' (Called Number), and 'Field Value'. There are 'Search' and 'Generate Report' buttons. Below the filter is a 'Message List' table. The table has columns: Type, Date, Called Number, Calling Number, Units, Status, Result, and Sender. Two messages are listed:

Type	Date	Called Number	Calling Number	Units	Status	Result	Sender
Send Fax	01/11/2018 12:44 PM	34915436540	anonymous	4	✓	OK	thomson eComFax
Received Fax	01/11/2018 12:50 PM	+34915436540		4	✓	Fax successfully sent	rgarcia@comfaynema.com

At the bottom of the table, there are navigation controls: '<< < > >>' and 'Select: 12 / 12 (0)'. On the right side of the table, it says 'Pages: FAXIN(4), CERTOUT(4)'.

Illustration 28 CertiFax Message List

In addition, from the history of the client's CertiFAX website you can see if a download has been requested by the addressee of the certified fax and when he or she accesses the certified fax. The remote, masked IP address is also registered; which is a requirement of the LOPD.

A screenshot of the 'Access History' page in the eComFax Pro user interface. The page has a light blue header with a menu icon and the text 'Access History'. Below the header is a table with three columns: 'Date', 'User', and 'Type'. The table contains three rows of data. The first row shows a 'DOWNLOAD' action on 5/11/2018 at 9:35:10 AM by a user with a long alphanumeric ID. The second row shows a 'VIEW' action on 5/11/2018 at 9:34:56 AM by the same user. The third row shows a 'CREATE' action on 5/10/2018 at 12:43:05 PM by a user named 'JGS (jgs-test)'. Below the table is a pagination bar with the text '<< < 1 > >>'.

Date	User	Type
5/11/2018 9:35:10 AM	37b1f810-189f-439f-94e4-3baafd77ad05 (jgs-test@gmail.com)	DOWNLOAD
5/11/2018 9:34:56 AM	37b1f810-189f-439f-94e4-3baafd77ad05 (jgs-test@gmail.com)	VIEW
5/10/2018 12:43:05 PM	JGS (jgs-test)	CREATE

<< < 1 > >>

Illustration 29 Access History to CertiFax

5.4 Notarial Testimony

The sender of the certified fax can furthermore request a notarial testimony that contributes to additional guarantees. The notary will attest that the CertiFAX exists in its electronic version and that its content are protected by a digital signature.

The screenshot shows the CertiFAX logo at the top, followed by the title 'Solicitar Testimonio Notarial'. Below this is a form titled 'Datos de la Solicitud'. The form is divided into two main sections: 'Datos Personales*' and 'Dirección de Entrega*'. The 'Datos Personales*' section includes fields for 'Nombre y apellido (Firma social)*', 'DNI (C*)', 'Correo electrónico de contacto*', and 'Celéfono correo electrónico de contacto*'. The 'Dirección de Entrega*' section includes a field for 'Dirección de Entrega*'. Below these sections is a section for 'Aceptación Pública en Presencia' with a radio button and a text area for 'Comentarios adicionales'. At the bottom of the form is a blue 'Aceptar' button. The footer of the page contains the text '© 2018 Cloud Worldwide Services S.L.' and 'Reservados todos los derechos. No se permite la explotación económica ni la transformación de esta obra. Queda permitida la impresión en su totalidad.

Illustration 30 Request of notarial testimony by CertiFAX

6. eComFax SMS

eComFax is a communications platform in which the fax is the main engine, but not the only engine.

Through the ease of SMS, eComFax can send messages to mobile phones without any difficulty.

As with the others, there are two possible ways: via web application or via email. From the website, once you are logged in, you should choose SMS and indicate the addressee's telephone number and write the message. If the message is over 160 characters the system will send the remaining characters in a different message.

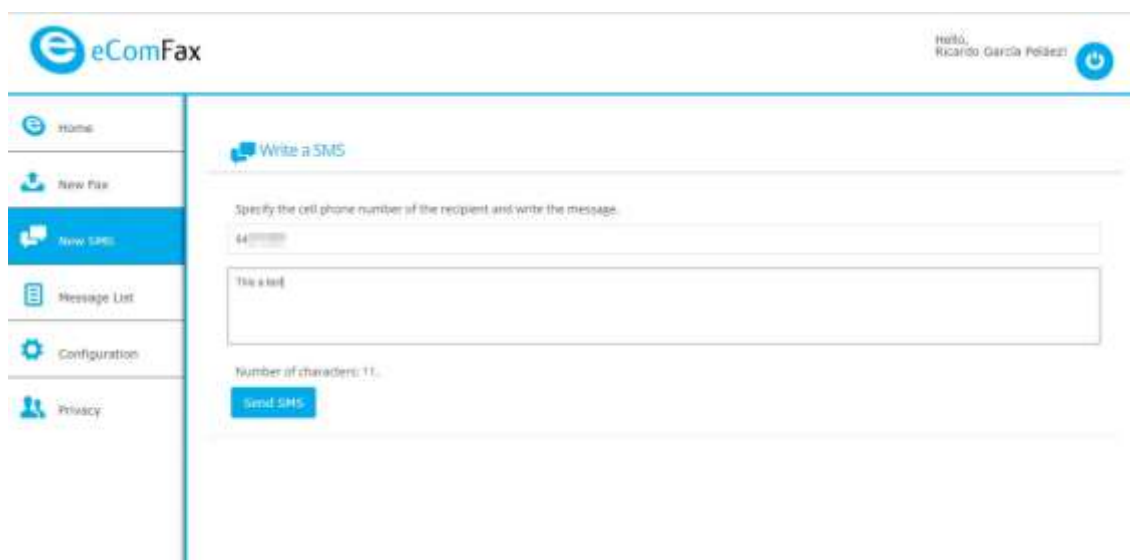

The screenshot shows the eComFax web interface. On the left is a sidebar menu with options: Home, New Fax, New SMS (highlighted), Message List, Configuration, and Privacy. The main area is titled 'Write a SMS' and contains a form with the instruction 'Specify the cell phone number of the recipient and write the message.' There are two input fields: the first contains '44' and the second contains 'This is a test'. Below the fields, it says 'Number of characters: 11...' and there is a 'Send SMS' button. In the top right corner, the user is logged in as 'Hello, Ricardo Garcia Pelaez'.

Illustration 31 Example of a sent SMS via web platform

As with email, you should write the addressee's telephone number followed by "@sms.ecomfax.com" and in the subject field you should indicate your security pin followed by the text that you wish to send. The body of the message will be lost.

7. eComFax CertiSMS

The Certified SMS service is an extension of the eComFax product with the primary objective of incorporating a probatory value, equivalent to Electronic Burofax, to the sending of SMSs. The CertiSMS service acts as a trusted third party (law 34/2002, July 11th and Directive 2000/31/CE): someone other than the parties involved in the transaction (the sender and the addressee of the certified fax) testifies as an independent witness thereby certifying that the determined transaction has been completed and safekeeping the evidence for future uses.

Within SecureFax the following advantages stand out:

- Report of certification in signed PDF
- Safekeeping of certified faxes (5 years)
- Web interface and SMTP
- History of certified SMS. Audits of accesses
- Notary testimonies
- eComFax technology

7.1 Operation of CertiSMS

The CertiSMS system consists of the sending of an SMS, which issues a record of delivery certification and the content of the message to the sender. Comunycarse, through its affiliate CWS, is a third party authority in this record of delivery via SMS, in addition to adding a time stamp. This certifies the content, date, and time. Each SMS certificate issued includes a text indicating its certification character.

Resultado:
SMS enviado correctamente

Estado:
OK

Detalles:

Id trabajo: (S)SZLKCraJoUK7tlV6vkKIDQ

Fecha: 17/11/2017 14:04:40 (GMT+0100)

Tipo de trabajo: Sms

Destino: 344 [redacted]

7.1.1 Sending methods

The CertiSMS module can be used from any client email through the same process used in the sending of faxes through eComFax. It is as simple as attaching a document and sending it to an email address. Although the client website is in beta, it will shortly be in the production version.

7.1.2 Via web

Although the client website is in beta, it will shortly be in the production version.

7.1.3 Via email

CertiSMS can be used from any client email. The text in the “subject” field will be sent as text, minimizing any attachment or text in the body of the message.

With the email we should write the addressee's address with his or her mobile telephone number followed by “@certisms.ecomfax.com” and in the subject field we should include our secure pin number followed by the text that we wish to include. The body of the text will be lost.
